What the Shift Needs to Know

How a team learns what shapes their day.

30 October 2026, Tobias Engl

Not every screen speaks to the customers. Some are hung in places only the staff can reach: at shift change, in the nurses' station, in the kitchen behind the swing door. They display what gets a team through the day.

Who's on duty today, who's filling in, and what handoffs are coming up? The duty roster is no longer a printed copy with handwritten changes it updates automatically as soon as someone swaps shifts. A sick leave notice in the morning appears on the screen a little later, and no one has to search in vain for a replacement.

On the production floor, the wall displays the shift's production count, the status of orders, and the number of days without an accident all clearly visible from the workstation. In the office, it shows meeting room availability and the day's schedule. What matters depends on the company, but it's just as easy to see everywhere.

These displays don't just organize information they also foster a sense of community. A welcome message for new colleagues, a thank-you after a tough week, a photo from the company party. ScreenWay integrates shift schedules and key metrics with existing systems and processes data in-house, ensuring that personnel data never leaves the company.

A well-informed team works more calmly. When everyone sees what needs to be done as soon as they arrive, the shift begins with work right away, without any lengthy searching.
